SUMMARY

Data Analyst with a B.Tech in Computer Science and hands-on experience in SQL, Python and Power BI. Built end-to-end projects on real public datasets of up to 34 million rows, covering data cleaning, analysis, dashboards and business recommendations. Most recently worked as a freelance Business Analyst at Turing, validating data samples and tracking quality metrics.

SKILLS

SQL: MySQL, PostgreSQL, CTEs, Window Functions, Joins, Query Optimization
Python: Pandas, NumPy, Matplotlib, Seaborn, Jupyter
BI & Reporting: Power BI, DAX, Power Query (ETL), Data Modeling, Data Visualization, Excel (Pivot Tables, Lookups), Dashboards, KPI Tracking
Analysis: Data Cleaning, Data Validation, EDA, Statistics
Tools: Git, GitHub, Jira, Agile

EXPERIENCE

Turing **Mar 2026 – Aug 2026**
Business Analyst (Freelance)

- Evaluated 200+ Gemini-generated responses and prompts weekly against structured quality criteria, achieving 92% agreement with senior reviewers.
- Curated and validated 40+ data samples weekly, running quality checks to find inconsistencies, exceptions and recurring patterns.
- Tracked task-level metrics and quality trends, and reported findings to identify gaps and support process improvements.

Distil Ventures Limited **Apr 2024 – Jul 2024**
Web Developer Intern

- Led a 5-member team to build and deliver 6 client applications within 3 months, working through daily stand-ups and manager feedback.
- Identified and resolved 60+ application issues through structured analysis and testing, improving project reliability.

PROJECTS

UPI Payments Market Dashboard | Power BI, DAX, Power Query github.com/koushikxy/upi-payments-dashboard

- Built a 3-page Power BI dashboard on 76 months of official NPCI data covering 140+ UPI apps, combining inconsistent monthly Excel files with one Power Query function and a lookup table that maps 302 app name variants.
- Wrote 15 DAX measures including market share, YoY growth and HHI concentration; showed PhonePe and Google Pay at 78% of UPI transactions, with concentration at its lowest since 2020 as challengers like Navi grew to 4.8%.

Grocery Reorder Analysis | MySQL github.com/koushikxy/grocery-reorder-analysis

- Loaded 33.8M order lines (3.4M orders, 206K customers) into MySQL and analysed repeat buying with CTEs, window functions and self-joins; found 59% of items are reorders and 12% of customers place 30% of orders.
- Reduced runtime by pre-aggregating into summary tables (six queries took 30 min before; the full analysis now runs in 13 min), and caught 333 products silently dropped during the CSV load.
- Identified frequently bought-together products using lift (up to 18x) and recommended bundles and reorder reminders.

Flight Fare Analysis | Python, Pandas github.com/koushikxy/flight-price-analysis

- Cleaned and analysed 300K+ domestic flight fares across 6 airlines and 30 routes from raw scraped data, parsing messy price, duration and stop fields.
- Found fares rise ~1.7x when booked within 15 days of departure and ~2.4x in the last 3 days; showed weekend flights cost ~5% more even when booked early.

EDUCATION

XIM University, Bhubaneswar **Aug 2021 – Apr 2025**
B.Tech in Computer Science and Engineering (Hons.)

CERTIFICATIONS

Google Data Analytics Professional Certificate 2025

Data Analytics with Python – NPTEL 2024
